

To support the launch of the SP Sport Maxx TT, Dunlop is also releasing the SP Sport Maxx GT in some key high performance vehicle sizes. The SP Sport Maxx GT has been designed to provide the ultimate dry performance at high speeds and to suit high performance vehicles such as the Porsche 911, Audi A8 and BMW M5. It also features Touch Technology to ensure it has a balanced level of performance, so you are covered when driving your performance vehicle on the freeway or cruising around suburban streets.

HYBRID JOINTLESS BAND TECHNOLOGY

The new SP Sport Maxx GT features Hybrid Jointless Band Technology, which helps limit the amount of distortion applied to the tyre under high speed conditions. As a result the tyre maintains its shape at high speeds for a smooth and stable ride performance.

What we learn on the track, we take to the street.

The new Dunlop SP Sport Maxx TT and Dunlop SP Sport Maxx GT have been designed with some of the latest motorsport features to perform like a professional on the road. Constructed with Kevlar® and Touch Technology it's as close to the track as you can feel.

RACE TRACK TECHNOLOGY THAT LEADS THE WAY

Following on from the success of the Dunlop SP Sport Maxx, this outstanding new tyre includes design innovations for superior driving precision. The new SP Sport Maxx TT is designed to meet the needs of the most demanding driver and high performance vehicle.

APEX CONTAINING KEVLAR® FIBRE

To enhance the tyre's responsiveness to the driver's steering impulse and create an exceptional driving experience, Kevlar® has been added to the apex or sidewall construction of the tyre. Kevlar® is used because it can maintain stiffness and strength in the sidewall even under high temperature conditions created when the tyre is in motion. As a result the SP Sport Maxx TT provides enhanced responsiveness when accelerating and braking, together with increased stability when cornering.

MOTORSPORT DERIVED TREAD COMPOUND

Dunlop has taken key findings from developing compounds designed purely for high speed motorsport racing and created the well balanced compound used in the SP Sport Maxx TT. As a result the SP Sport Maxx TT provides enhanced grip in both wet and dry conditions.

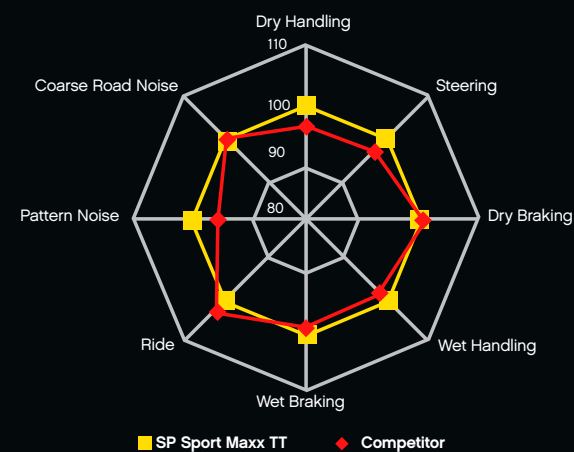

TOUCH TECHNOLOGY

Touch Technology combines a number of sophisticated tyre technologies to assist the tyre to deliver superior handling and grip in both wet & dry conditions, without compromising on high-speed stability or steering when cornering. Additionally it reduces the amount of tyre related road noise you hear inside the car, so you can enjoy the performance of the tyre in comfort.
